www.ablenetinc.com/communication

From simple to complex, Augmentative and Alternative Communication (AAC) devices assist persons with disabilities at all levels of language development starting with simple, single message devices. Users can easily transition to basic choice making, sequential communication, and even more complex communication opportunities. AbleNet's complete line of easy-tech AAC devices is there for you at each stage.

When choosing a communication device, a few questions to consider:

1. **How many messages will be required?**
2. **Where will the device be used — on a table, on a wheelchair, or in hand?**
3. **What access methods will be used, direct or external switches?**
4. **Does this device need mounting?**
5. **Will this device be used by an individual or in a group setting?**
