

# Clicker 6

Literacy without limits!

## Raise literacy standards across the curriculum

Clicker is the multi award-winning literacy tool that enables children of all abilities to significantly develop their reading and writing skills.

Clicker is used on over half a million school computers and in over 90% of UK primary schools. Last year, we released the best ever version of this much-loved software – Clicker 6.

- **Talking word processor** - When children complete a sentence, Clicker will automatically read it aloud. This encourages them to review their work, and find and correct errors for themselves.
- **Word prediction** - Clicker's intelligent word predictor suggests words that fit the context of the pupil's writing, encouraging them to use more adventurous vocabulary. Children are able to create flowing pieces of text with accurate spelling and grammatically correct sentences.
- **Picture support** - The Crick Picture Library makes it easy for children to illustrate their own books or documents, and for you to provide extra graphical support where needed.
- **Tools for creativity** - Clicker 6 includes a variety of tools that encourage children to express themselves, including webcam support, painting tools and child-friendly Click & Edit books.
- **Activity wizards** - Clicker activities give pupils point-and-click access to whole words, phrases and pictures, helping them to construct their work independently. Clicker Wizards make it easy for you to create personalised sentence building tasks, word banks, writing frames, talking books and more!
- **Ready-made curriculum activities** - Haven't got time to make your own activity? There are hundreds of topic-specific resources for Clicker available for free on our LearningGrids site! The site is updated every two weeks, and can be accessed directly from within Clicker.
