

Clicker 6

Literacy without limits!

Clicker and Autism

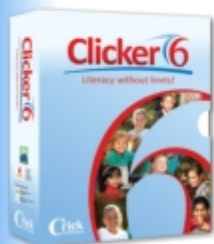

Clicker is the multi award-winning literacy tool that enables children of all abilities to significantly develop their reading and writing skills. Clicker 6 is the best ever version of this much-loved educational software.

Clicker is a powerful tool for supporting pupils across the autistic spectrum:

- **Communication difficulties** - Use Clicker with pictures or symbols to support pupils who have communication difficulties. Children are able to use completely personalised grids to communicate, and with the speech feedback reading all completed sentences aloud, Clicker becomes a powerful communication tool.
- **Handwriting replacement** - Some ASD pupils struggle with motor control in their hands, making it difficult and frustrating to create a neat piece of work. With Clicker's primary word processor this obstacle is removed. Writing productivity is increased, and completed pieces of work are easily printed and displayed with pride.
- **Personalisation** - Every element of Clicker can be tailored to suit all ages and abilities. It's simple to tweak features such as the size of the icons and the colours used. The content and amount of support is easily personalised too.
- **Active engagement** - Using technology is often a great motivator for pupils. With the opportunity to register your own media libraries in Clicker, the children's favourite images, sounds and videos can be easily used as part of their Clicker Sets and in their writing.
- **Visual learning** - Many people with an ASD are thought to be visual learners, therefore presenting information on screen can help to support them. Clicker can be used to help pupils understand their day, with a visual timetable or a learning log. Or provide information about expectations in the form of an on-screen book.
