

Clicker and Down's Syndrome

Clicker is the multi award-winning literacy tool that enables children of all abilities to significantly develop their reading and writing skills.

Clicker is a valuable aid to learning for pupils with Down's Syndrome. It allows them to use their strengths in visual learning, and gives them the opportunity to practise their skills as often as required, reducing any fear of failure.

- **Developing speech and language skills** - Clicker's built-in sound recorder supports pupils in developing their speech and language skills. Many Clicker activities offer children the chance to practise saying words individually and in sentences. All recordings are saved with the Clicker Set, enabling easy tracking of skills over time.
- **Learning whole words** - Pupils with Down's Syndrome often learn words by sight before they are able to recognise or apply the rules of letter sounds, phonemes and graphemes. Using words with pictures in a Clicker Set offers further visual support to recognise the word being used. Create a Clicker matching activity to further encourage children to look carefully at words and compare them.
- **Understanding sentence structure** - Clicker's forced order grids enable pupils to learn correct sentence structure through practising word order rules, and encourage the use of complete sentences. Providing a model sentence gives children the opportunity to rehearse making sentences before they are written.
- **Visual learning** - It's often the case that pupils with Down's Syndrome have strengths with learning from visual information. It's simple to create on-screen books for children to use in class, and pupils can easily make their own with Clicker's new child-friendly Click & Edit books.
