

Clicker 6

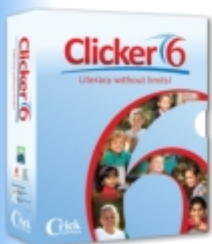

Literacy without limits!

Clicker and Dyslexia

Clicker is easily the most widely-used reading and writing tool in the UK for young learners with dyslexia. Its simplicity and flexibility make it highly effective across the primary age range and curriculum.

- **Access whole words** - Clicker removes the writing block that hinders many children with dyslexia by providing point-and-click access to whole words and phrases relevant to their writing task.
- **Improve spelling** - Speech-supported Clicker Grids help pupils to internalise the link between how a word looks and how it sounds. When a sentence in Clicker is completed it is read aloud, encouraging learners to review and correct their writing.
- **Word prediction** - Clicker's integrated word predictor supports dyslexic pupils by providing a list of potential words for them to select from as they type. Children are able to create flowing pieces of text with accurate spelling and grammatically correct sentences.
- **Tailor support** - The new activity wizards in Clicker 6 make it easier than ever before to provide the writing support your pupils need. Create personalised sentence building activities, word banks and writing frames in a matter of minutes!
- **Develop reading skills** - Clicker talking books are a fantastic way of providing accessible reading materials for pupils with dyslexia. You can create your own, download free resources from LearningGrids.com, or purchase one of our acclaimed 'Powered by Clicker' talking book series.
